

Process Combustion

STRESS HEATING

Process Combustion Ltd manufacture a bespoke series of direct fired heating units designed to meet the specific requirements for stress heating within the training environment.

The heaters typically are designed to heat the training facility to 39 C to meet the UK Fire & Rescue Service training requirement for stress heating.

The heaters operate either on LPG from a cylinder or direct from a natural gas supply.

Control of the heater is provided by a remote control station which can be located within the facility control room with simple start/stop switch to turn the heater on/off to suit the training requirement.

**TYPICAL HEATER INSTALLATION
C/W SECURITY CAGE / LPG STORE**

**REMOTE CONTROL STATION
(CONTROLS STRESS HEATER
& 2 SMOKE SYSTEMS)**
